SUMMARY

iOS engineer delivering high-impact products across consumer and enterprise applications. At CNN, I improve build and startup performance, optimize experiences for iPhone Duo and iOS 27, modernize SwiftUI architecture, and strengthen experimentation, observability, CI/CD, and App Store releases for an application used by millions worldwide. Previously at AT&T, I shipped technician workflows serving 11,000+ users and generating multi-million-dollar business impact.

EXPERIENCE

CNN (SKYDANCE CORPORATION) **Atlanta, Georgia**
iOS Software Engineer II, Technical Interviewer *January 2026 – Present*

- Improved the CNN iOS app build time by ~30% through Xcode compilation caching and build-path optimizations
- Reduced app startup time by ~23% by parallelizing SDK initialization and sequencing user and subscription flows
- Optimized CNN for iPhone Duo by adopting size-class-based adaptive layouts and resolving UX issues across orientations
- Drove iOS 27 readiness by upgrading local and CI toolchains to Xcode 27/27.1 and adopting UIKit's scene-based lifecycle
- Implemented server-driven A/B testing with persistent user bucketing, header handling, and experiment attribution
- Added Firebase Performance instrumentation for Watch, articles, and video playback, to measure critical user journeys
- Established router-driven SwiftUI navigation using NavigationStack, environment-based routing, and modal presentation
- Hardened CI quality gates with deterministic code-coverage enforcement, app-size regression checks, and app-thinning reports
- Automated release versioning and branch synchronization while eliminating up to 30 minutes of obsolete dSYM polling
- Served as iOS release manager for five App Store releases, coordinating regression handoff, submissions, and phased rollouts
- Consolidated localization into a single String Catalog and adopted locale-aware date formatting across various app areas
- Resolved production-critical failures affecting widgets, notification processing, privacy screens, and application lifecycle behavior

AT&T INC. **Atlanta, Georgia**
iOS Software Engineer, Lead Technical Interviewer *July 2024 – December 2025*

- Contributed to Atlas, an iOS app used by 11,000+ technicians nationwide to install, troubleshoot, and repair broadband services
- Architected and implemented a new dispatch fee for buried service wire, generating $12M in annual fee revenue
- Built Referral Opportunities screen with consent and product referrals, driving $1.8M ROI year one and $15.9M ROI year five
- Added damage claim in-app validation, streamlining damage claim workflows and saving $10M annually
- Rebuilt the damage claim views from the ground up, adhering to Apple Human Interface Guidelines with modern SwiftUI
- Created a feature allowing customers to quickly register new myAT&T accounts within Atlas and validate email addresses
- Led Annual Recap feature rollout, boosting technician-manager engagement and enabling $3.5M repeat and churn annual savings
- Rewrote Expert Quest API, cutting response payloads by 20,000+ lines to improve app responsiveness and reduce data use
- Fixed 50+ UI issues and rebuilt My Habits technician job analysis with SwiftUI for high-performance data visualization
- Optimized app speed by migrating several view models to Apple's Observation framework and enabling concurrent diagnostics
- Competed in SDS hackathon, redesigning myAT&T with gamification to boost engagement; placed 4th in final round

Software Engineering Intern *June 2023 – August 2023*

- Developed 8 API endpoints for ORCA backend infrastructure that connect with SQL server and return appropriate objects
- Enhanced ORCA regional backend codebase by implementing unit tests for a 14% increase in total test coverage
- Received honorary placement in hackathon with AI-focused customer service training app and presented to CTO and Senior VPs

NCR CORPORATION **Atlanta, Georgia**
Software Engineering Intern *May 2022 – August 2022*

- Crafted 34 Python scripts to automate the process of removing terminated employees as users from the enterprise tools set
- Boosted user removal processing time by 97.25% by eliminating 48 hours of manual labor through pipeline automation
- Nominated for the NCR Software & Technology R&D Excellence Award due to project's processing efficiency

EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY, College of Computing **Atlanta, Georgia**
Bachelor of Science in Computer Science (Intelligence and Systems Architecture) *May 2024*

- **Distinctions:** Faculty Honors, Dean's List GPA: 3.95/4.00
- **Course Highlights:** Computer Vision, Operating System Design, Machine Learning, Algorithm Design and Analysis

SKILLS

iOS: Swift, SwiftUI, UIKit, Swift Concurrency, Observation, Core Data, SwiftData, StoreKit, AVFoundation, MapKit, Accessibility
Architecture & Performance: MVVM, NavigationStack, adaptive layouts, startup optimization, instrumentation, A/B testing
CI/CD & Tooling: Bitrise, GitHub Actions, App Store Connect, Firebase Performance, Crashlytics, SPM, CocoaPods, Bash, Git
