SUMMARY

As a highly skilled iOS engineer, I have shipped high-impact work on AT&T's Atlas app for 11,000+ field technicians by building SwiftUI-forward features and systems that improved engagement, accessibility, and measurable business outcomes. Now, I contribute to CNN's iOS app used by millions of people worldwide, where I improve build and startup performance, modernize CI/CD and release automation, and strengthen quality through instrumentation, test coverage, and operational rigor. I combine strong product sense with deep technical ownership across large codebases, modern Apple frameworks, and cross-functional collaboration.

EXPERIENCE

CNN (WARNER BROS DISCOVERY INC.) **Atlanta, Georgia**
iOS Software Engineer II *January 2026 – Present*

- Improved app build time by ~30% by configuring Xcode 26 compilation caching and implementing build-path optimizations
- Reduced app startup time by ~23% by parallelizing user, subscription, and SDK initialization and sequencing flows
- Automated release workflow through version bumps after release cuts, GitHub Actions configurations, phased App Store rollouts
- Added Firebase Performance for Watch tab, articles, and push deep links, documented startup metrics and release management
- Shipped iOS PR code coverage, binary-size gates vs develop branch, and updated Bitrise CI/CD / onboarding / README docs
- Removed unused Amazon Ads SDK, non-native scripts and leftover artifacts, and dead code to modernize native codebase
- Fixed critical Firebase Crashlytics issues: GDPR privacy text on resume and offline/airplane refresh and cold-launch stability
- Replaced Node-based secret loading and Jira build notes with bash/curl on CI to trim toolchain dependencies
- Served as iOS release manager for App Store releases (26.7.x): managed phased rollout, listings, regression handoff
- Enabled local Bitrise workflows to run the same unit-test step as CI with secrets configured before PRs can be opened

AT&T INC. **Atlanta, Georgia**
iOS Software Engineer, Lead Technical Interviewer *July 2024 – December 2025*

- Contributed to Atlas, an iOS app used by 11,000+ technicians nationwide to install, troubleshoot, and repair broadband services
- Architected and implemented a new dispatch fee for buried service wire, generating $12M in annual fee revenue
- Built Referral Opportunities screen with consent and product referrals, driving $1.8M ROI year one and $15.9M ROI year five
- Added damage claim in-app validation, streamlining damage claim workflows and saving $10M annually
- Rebuilt the damage claim views from the ground up, adhering to Apple Human Interface Guidelines with modern SwiftUI
- Created a feature allowing customers to quickly register new myAT&T accounts within Atlas and validate email addresses
- Led Annual Recap feature rollout, boosting technician-manager engagement and enabling $3.5M repeat and churn annual savings
- Rewrote Expert Quest API, cutting response payloads by 20,000+ lines to improve app responsiveness and reduce data use
- Fixed 50+ UI issues and rebuilt My Habits technician job analysis with SwiftUI for high-performance data visualization
- Optimized app speed by migrating several view models to Apple's Observation framework and enabling concurrent diagnostics
- Competed in SDS hackathon, redesigning myAT&T with gamification to boost engagement; placed 4th in final round
- Conducted 1-3 engineering interviews weekly, assessing candidates on data structures, algorithms, and object-oriented design

Software Engineering Intern *June 2023 – August 2023*

- Developed 8 API endpoints for ORCA backend infrastructure that connect with SQL server and return appropriate objects
- Enhanced ORCA regional backend codebase by implementing unit tests for a 14% increase in total test coverage
- Received honorary placement in hackathon with AI-focused customer service training app and presented to CTO and Senior VPs

NCR CORPORATION **Atlanta, Georgia**
Software Engineering Intern *May 2022 – August 2022*

- Crafted 34 Python scripts to automate the process of removing terminated employees as users from the enterprise tools set
- Boosted user removal processing time by 97.25% by eliminating 48 hours of manual labor through pipeline automation
- Nominated for the NCR Software & Technology R&D Excellence Award due to project's processing efficiency

EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY, College of Computing **Atlanta, Georgia**
Bachelor of Science in Computer Science (Intelligence and Systems Architecture) *May 2024*

- **Distinctions:** Faculty Honors, Dean's List GPA: 3.95/4.00
- **Course Highlights:** Computer Vision, Operating System Design, Machine Learning, Algorithm Design and Analysis

SKILLS

iOS Specific: Swift, SwiftUI, SwiftData, CoreData, Observable, ARKit, MapKit, TipKit, UIKit, Human Interface Guidelines
Other Languages/Tools: Python, Java, C, JavaScript, Dart, C#, Figma, Flutter, Firebase, Unity, React, Node.js, Git, APIs
