SUMMARY

As a highly skilled iOS developer who has contributed to the AT&T Atlas iOS application, I have demonstrated my capacity to successfully lead the development of key initiatives that improve technician engagement and performance. My expertise in SwiftUI has driven significant enhancements in user experience and accessibility, and I have built several features that enhance technician workflows and revenue generation. I am eager to bring my skills and leadership to the right opportunity and make a similar impact.

EXPERIENCE

AT&T INC. **Atlanta, Georgia**

iOS Senior Specialist Engineer, Lead Technical Interviewer *July 2024 – Present*

- Contributed to Atlas, an iOS app used by 11,000+ technicians nationwide to install, troubleshoot, and repair broadband services
- Architected and implemented a new dispatch fee for buried service wire, generating $12M in annual fee revenue
- Built Referral Opportunities screen with consent and product referrals, driving $1.8M ROI year one and $15.9M ROI year five
- Added CAMS Damage Claim in-app validation, streamlining damage claim workflows and saving $10M annually
- Rebuilt the damage claim views from the ground up, adhering to Apple Human Interface Guidelines with modern SwiftUI
- Created a feature allowing customers to quickly register new myAT&T accounts within Atlas and validate email addresses
- Led Annual Recap feature rollout, boosting technician-manager engagement and enabling $3.5M repeat and churn annual savings
- Rewrote Expert Quest API, cutting response payloads by 20,000+ lines to improve app responsiveness and reduce data use
- Fixed 50+ UI issues and rebuilt My Habits technician job analysis with SwiftUI for high-performance data visualization
- Optimized app speed by migrating several view models to Apple's Observation framework and enabling concurrent diagnostics

Software Engineering Intern *June 2023 – August 2023*

- Developed 8 API endpoints for ORCA backend infrastructure that connect with SQL server and return appropriate objects
- Enhanced ORCA regional backend codebase by implementing unit tests for a 14% increase in total test coverage
- Received honorary placement in hackathon with AI-focused customer service training app and presented to CTO and Senior VPs

NCR CORPORATION **Atlanta, Georgia**

Software Engineering Intern *May 2022 – August 2022*

- Crafted 34 Python scripts to automate the process of removing terminated employees as users from the enterprise tools set
- Boosted user removal processing time by 97.25% by eliminating 48 hours of manual labor through pipeline automation
- Nominated for the NCR Software & Technology R&D Excellence Award due to project's processing efficiency

BUSINESSS PARTNER SOLUTIONS INC. **Riverside, California**

Software Engineering/Sales and Marketing Intern *June 2021 – August 2021*

- Issued a $3000+ savings plan by migrating current processes to Kubernetes and NeuVector container security platforms
- Authored a 50-page documentation detailing security benefits of application containers compared to virtual machines

EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY, College of Computing **Atlanta, Georgia**

Bachelor of Science in Computer Science (Intelligence and Systems Architecture) *May 2024*

- **Distinctions:** Faculty Honors, Dean's List GPA: 3.95/4.00
- **Course Highlights:** Computer Vision, Operating System Design, Machine Learning, Algorithm Design and Analysis

PROJECTS

SPOTIFY UNWRAPPED | *React Web App*

- Built personalized data dashboard using Spotify API with 4 profile-specific features, such as top artists and playlists
- Added feature allowing users to sort tracks in their public playlists by 3 different measures: danceability, tempo, and energy
- Utilized the Spotify OAuth framework to securely enable user login and protection of user data through appropriate permissions

XV6 OPERATING SYSTEM ENHANCEMENTS | *Kernel Feature Development in C*

- Achieved 4 kernel feature enhancements, including virtual memory performance improvements and a stack backtrace method
- Refined the kernel thread process scheduler by adding 4 different algorithms, including FIFO and Priority Round Robin
- Augmented security of user data by implementing user authentication with a modified hash salt and aes256-encryption

SKILLS

iOS Specific: Swift, SwiftUI, SwiftData, CoreData, Observable, ARKit, MapKit, TipKit, UIKit, Human Interface Guidelines
Other Languages/Tools: Python, Java, C, JavaScript, Dart, C#**,** Figma, Flutter, Firebase, Unity, React, Node.js, Git, APIs
